

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 15, line 11 with the following rewritten version:

-- According to the present invention, because the screw-in portion of the screw operation structure is capable of being mounted on the reel unit, the screw member and the operation member can be easily mounted on the screw-in portion before the screw-in portion is mounted on the reel unit. In addition, the screw member can be prevented from falling off by the tubular portion after the screw-in portion is mounted on the reel unit, because the tubular portion of the screw-in portion has a diameter that is larger than the inner diameter of the threaded portion of the screw member ~~portion~~. --
